LEARNING OBJECTIVES

- Education of below-grade and plaza deck water proofing solutions for open, active daylight spaces, and walkable communities
- Material selection and product exposure to include sodium bentonite, super adsorbent polymers, self-adhered membranes, hot rubberized asphalt, and concrete waterstops
- Evaluation and selection of appropriate waterproofing products and accessories for specific site conditions including preservation/reuse of existing facilities
- The importance of quality control measures for desired performance of installed waterproofing systems and total building commissioning
